I have taught for fifteen years. The subject keeps changing — drawing, design, AI, bread — and the method never does: teach the idea, find out why it doesn't survive the room, then change the situation rather than the person. **More than a thousand beginners** taught to draw, 2011–2019. At Bayer Consumer Health since: two organization-wide curricula, one of them **required training I delivered to 100+ marketers** and now mandatory on the company platform, still running without me; **zero AI literacy to daily practice across all six craft disciplines in twelve months**; **five internal AI tools shipped in a year**. I am building that organization's AI learning track now, inside a science-division roadmap covering **more than a thousand people**.

TEACHING & CURRICULUM — 2011 to present

Public and beginner audiences

- **Drawing and painting · 2011–2019 — more than a thousand adults and children.** Public classes of 25–50, a few times a week for years, plus private students. Most had never drawn seriously and many had not come to learn anything. The method: *measure, don't trust your eye*. Explaining that the eye lies never worked, so the lesson became a **procedure that runs at the moment of the decision**.
- **Bread-making · 2025–present.** Adults and children at a flour mill, in groups of four to six. Same move: not "you'll know when it feels right" but a check — poke test, windowpane, dough temperature.

Organizational curriculum · Bayer Consumer Health

- **Design Capability Curriculum** (2023, co-author) — five modules, launched as **required training** inside the marketing organization. **I delivered three sessions to 100+ marketers**; it is now **mandatory on the internal learning platform**, still running without me, and was later extended to the Science organization.
- **The briefs improved — then I went and found out why they still stalled.** Not missing knowledge: **missing information, and the cost of going to find it**. That diagnosis produced the **Brief Translator**, a Claude-backed tool now in the organization's AI hub.
- **Inclusive Design standard** (2024, co-author) — **189 slides**, adopting **WCAG AA across print, web, mobile, pack and point of sale**, for internal colleagues *and outside agencies*. Named validation tooling, five evaluation factors each with a checklist, letterform-level typography — and a **process gate: a contrast check at QC**, so the teaching survives a deadline and a person who was never in the training.

AI fluency

- **Departmental AI hackathons — monthly, two full days, ~12 teams**, open across a **1,000+-person science organization**. I teach the master classes in the run-up — AI and vibe-coding, for people who have never built software — then facilitate, coach inside teams, and judge. **The first produced seven tools ready to scale**; its winning build is being launched across the medical team, and a second produced a field-sales application now in development.
- **Leadership AI immersion sessions** — showing organizational capability and how I actually work, in Claude Code and Obsidian. Converted into **five concrete 90-day pilot commitments**.
- **A multi-day AI workshop in Cambridge, England with our division's Science President** — which led to my becoming Product Experience Science AI lead, and from there to my current role.
- **Building the 'Learn AI' track** for the ~115-person Product Experience domain, as my part of the science-organization AI roadmap. Organized by task and by tool; in rollout.
- **"AI soup."** With Claude, Microsoft Copilot and internal models all running at once, the question colleagues actually ask is *which tool do I use?* I dissolved it rather than answered it — the knowledge goes in a layer **any** tool can call. Built at three scales: my own vault, a machine-readable "brand brain", the organization's knowledge server.
- **Zero AI literacy to active use across all six craft disciplines in twelve months**, with a **change-champion network in each sub-home** so the teaching is delivered by someone other than me.
- Speaker, **"AI for Designers"** (Nashville, 2026) — five durable principles rather than tactics. **Trained faculty and students** on 3D printing, scanning and VR/AR at William Paterson University (2017–2019).
- **Built at home (personal, 2026):** a local voice assistant across the house — different agents for different people, including a kids agent with **no tool access at all**, a permissions boundary rather than a content filter. Where I prototype learning formats that only work with a model in the loop.

EXPERIENCE

Senior Designer – AI Lead, Product Experience Bayer Consumer Health · Whippany, NJ

MAY 2019 — PRESENT

AI-assisted production systems · designed and shipped, 2025–2026

- **CreativeLab** — node-based production pipeline consulting a machine-readable **"brand brain"** at every step, so output is on-standard by construction rather than by review. **One product through five channels with three regulated changes in sixty seconds.**
- **Knowledge platform (MCP)** — shared knowledge server across six sub-homes, **one deployment serving three AI surfaces**: written once, reaches people wherever they already work.
- **Artwork review agent** — text-and-vision comparison catching single-character regulatory marks reviewers miss, with confidence scores and visual diffs. **Review time 15–20 minutes → under one.**
- **AI Hub** — the organization's front door to five internal tools behind single sign-on. Internal tools ship **in days against a four-to-six-week agency cycle**.

Brand and multimedia production · 2019–2024

- Designed the packaging and led go-to-market creative for the **MiraFAST** launch — **inception to design lock in a three-week sprint**, possible because it was designed in-house rather than briefed out. **#1 overnight laxative** in its category; with **MiraFIBER**, roughly **\$79MM in cumulative retail sales**.
- Operationalized the **One A Day** relaunch across **50+ products and 1,000+ creative assets** — digitized the brand book into the single standard every agency worked from, and developed the animations that introduced the new designs.
- Art-directed the **One A Day Kids** photoshoot and video end to end, a 20×30-foot trade-show environment on six-figure budgets, and three consecutive years of a 200-attendee event tour. Wrote the **design briefs** and the **RFPs** used to solicit and evaluate agency bids. Working with image-generation models since **2023**.

Design Lab Manager William Paterson University — Research Technology · Wayne, NJ

DEC 2017 — MAY 2019

- Ran the emerging-technology stack — 3D printing and scanning, VR and AR — and owned the CAD-to-fabrication pipeline. Partnered with the **Psychology department** to prototype sensors for lab experiments, co-creating with a department whose vocabulary was nothing like mine.

Electromechanical Technician

Siemens Healthcare · Flanders, NJ

DEC 2014 — MAY 2016

- Built clinical diagnostic analyzers: precision assembly, circuit calibration, and QC against regulatory standards; beta-tested hardware and software and documented defects that fed product improvements.

SKILLS

Teaching and curriculum — Curriculum design for adults and complete beginners · organization-wide standards written for delivery by others · required and mandatory training design · workshop and hackathon design · executive immersion sessions · conference speaking · mentoring.

Accessibility — WCAG AA across print, web, mobile, pack and point of sale · contrast validation and perceptibility testing · accessible typography · accessibility written into a QC gate.

Content production — Writing (standards, curricula, briefs, executive decks) · presentation design in PowerPoint, Google Slides and Keynote · motion and 3D · art direction of photography and video · Adobe Creative Suite, Figma, After Effects, Cinema 4D/Blender · drawing and painting.

AI-native practice — Agentic coding tools daily · agent and prompt design · Model Context Protocol server authorship · retrieval over internal knowledge · multi-provider by design, swappable · fine-tuning · local model deployment · TypeScript, React, Node. Not an engineer by training; I build what I need to ship.

EDUCATION

BFA, Graphic Design · William Paterson University · 2017–2019 · *Summa Cum Laude* · **AFA, Visual Arts** · County College of Morris · 2016–2017 · *Summa Cum Laude* · **Drawing & Painting** · Art Students League of New York · 2011–2015
